Classical Meta-Analysis

Model Summary

Meta-Analytic Tests

Subgroup		Test	p
Heterogeneity	Synthetic	$Q_{\omega}(8) = 18.31$	.019
	Natural	$Q_{\omega}(20) = 53.83$	< .001
Pooled effect	Synthetic	$t(8) = 11.70$	< .001
	Natural	$t(20) = 7.62$	< .001
Subgroup differences		$Q_{\omega}(1) = 46.86$	< .001

Meta-Analytic Estimates

		Estimate	95% CI		95% PI	
Subgroup			Lower	Upper	Lower	Upper
Pooled effect	Synthetic	0.915	0.871	0.945	0.788	0.969
	Natural	0.691	0.642	0.736	0.495	0.837
τ	Synthetic	0.412	0.083	1.145		
	Natural	0.381	0.210	0.623		
τ^2	Synthetic	0.169	0.007	1.312		
	Natural	0.145	0.044	0.388		
I^2	Synthetic	56.31	4.964	90.89		
	Natural	62.85	34.01	81.85		

Note. The pooled effect is transformed using log odds to proportions transformation.

Fit Measures

Subgroup		Observations	Log Lik.	Deviance	AIC	BIC	AICc
ML	Synthetic	9	−8.363	16.21	20.73	21.12	22.73
	Natural	21	−16.46	39.00	36.92	39.01	37.59
REML	Synthetic	9	−8.003	16.01	20.01	20.17	22.41
	Natural	21	−16.24	32.48	36.48	38.47	37.19
