Subject: Submission of manuscript entitled *“Effect of Dark Chocolate and Oat-Based Snack Intervention on Anxiety, Blood Pressure, and Heart Rate among Adolescents: A Quasi-Experimental Study”*

Dear Chief Editor,

I, Arsulfa, on behalf of my co-authors, would like to submit our original research article entitled *“Effect of Dark Chocolate and Oat-Based Snack Intervention on Anxiety, Blood Pressure, and Heart Rate among Adolescents: A Quasi-Experimental Study”* for consideration for publication in the Journal of Nepal Health Research Council.

This study evaluates the effectiveness of a nutrition-based intervention using dark chocolate and oat-based snacks in improving anxiety levels and cardiovascular parameters among adolescents. Given the increasing burden of adolescent mental health problems and early cardiovascular risks, particularly in low- and middle-income settings, this study provides evidence for a simple, accessible, and scalable preventive strategy.

Our findings demonstrate that the intervention significantly reduces anxiety levels and improves blood pressure and heart rate outcomes, highlighting its potential application in school-based health promotion programs.
